

2026 - BASE EMISSIONS
23.44 tCO₂e

2050 - NET ZERO

Ngā Mahi Āhurangi Our Climate Action

Recognising that better environmental outcomes benefit all our communities, Community Trust South supports effective and collaborative climate action across its rohe/region.

The Trust is committed to achieving net zero greenhouse gas emissions by 2050 and reducing environmental impact across our operations, investments and granting activity. Through this work, we aim to contribute to a more sustainable and equitable future for our communities.

As an active member of the Funders Commitment to Climate Action Aotearoa, we continue to align our mahi and funding practices with the seven core commitments for meaningful climate leadership, supporting a low-carbon, climate-resilient and just transition.

During the year, we partnered with Ekos to measure and externally review our operational greenhouse gas emissions, building on existing initiatives such as electrifying our vehicle fleet, hosting community decarbonisation workshops, and embedding climate considerations into investment decision-making.

This work established the Trust's first greenhouse gas emissions baseline (total gross GHG emissions: 23.44 tCO₂e), providing a benchmark to guide future priorities and inform the review of our Climate Action Plan in 2027.

Sustainability is embedded across organisational decision-making and remains a key focus of our Sustainability & Climate strategic pou, shaping how we operate, invest, and partner with our communities.
